Project Abstract Submission Form

Sec No-9	Team No-3	Project Title- Service Request App for Home Services
----------	-----------	--

1. Abstract

Cross-Platform Service Request App for Home Services (Repairs) is a mobile application designed to simplify the process of requesting and managing home repair services. Customers can use the application to raise service requests for various home maintenance and repair needs, while technicians can receive, manage, and update assigned service requests in real time. The system provides real-time synchronization between customers, technicians, and service providers, ensuring that request status and updates remain consistent across platforms. The application also supports technician allocation, push notifications, service request management, analytics, and user profiles. A single-codebase approach will be used to develop the application for both Android and iOS, reducing development complexity and maintenance effort. The proposed solution aims to provide a convenient, transparent, and efficient platform for connecting customers with home-service technicians and improving the overall service-request management process.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030594	Pydi devi sree	
2520030127	Kallu shresta	
2520030367	k.risitha	

3. Frameworks / Platforms / Software Used

- **Flutter (Dart)** – Cross-platform mobile application development
- **Firestore** – Authentication, real-time database/synchronization, notifications
- **Node.js** – Backend/API development
- **MySQL** – Database management
- **API** – Communication between frontend and backend services
- **Provider / Riverpod** – State management
- **Firestore Cloud Messaging (FCM)** – Push notifications
- **Android & iOS** – Target mobile platforms

Guide Name and Signature (remarks if any) _____
